M stands for Morning, A Afternoon, ☉ for Sunday.

Note, That when by reason of long Droughts in Summer, or continual hard Frosts in Winter, the Fresh Waters are low, as also when the Wind blows hard at N. or N. W. the Tides may hold up longer than the times shewed in the Table.
 That when the contrary Winds blow, or by reason of great Rains, the Freshes are increased, it holds not out so long: yet have I very seldom found the difference above half an hour.

The Table may be made to serve places under-written, by		SUBTRACTING
